RE: Tan Nhat Le
1 Eden Dr
Stony Brook, NY11790

The Association for Computing Machinery (ACM) is a non-profit international scientific and educational organization dedicated to advancing the art, science, engineering, and application of information technology, serving both professional and public interests by fostering the open interchange of information and by promoting the highest professional and ethical standards. ACM will be sponsoring The seventh ACM International Conference on Future Energy Systems (ACM e-Energy), from June 21-24, 2016, at the Delta Hotel, in Waterloo, Canada, under the leadership of the ACM Special Interest Group on Data Communication (SIGCOMM). Attendance is open to all those interested in the subject matter.

ACM e-Energy aims to be the premier venue for researchers working in the broad areas of computing and communication for smart energy systems, and in energy-efficient computing and communication systems. By bringing together researchers in a high-quality single-track conference with significant opportunities for individual and small-group interaction, it will serve as a major forum for presentations and discussions that will shape the future of this area.

Tan Nhat Le is a co-author of a paper accepted for presentation at this conference entitled "Joint Capacity Planning and Operational Management for Sustainable Data Centers and Demand Response." Authors are expected to attend the conference to present their research and answer questions about it.

The importance of computing to the future is unquestioned, and the critical role of the computing professional is constantly changing. ACM's broad array of life-long learning and skill development opportunities include tutorials, workshops, conferences, online books, online courses, and the ACM Digital Library. This extensive range of options and opportunities make it possible for computing professionals to keep abreast of technology and maintain a competitive advantage.

The Association for Computing Machinery (ACM) is the world's leading educational and scientific computing society and the resource for lifelong learning in the rapidly changing field.

Sincerely,

Carolina Erazo
